

31-Oct-2008 White Paper about Bitcoin

<https://bitcoin.org/bitcoin.pdf>

Jan-2009 Bitcoin was launched

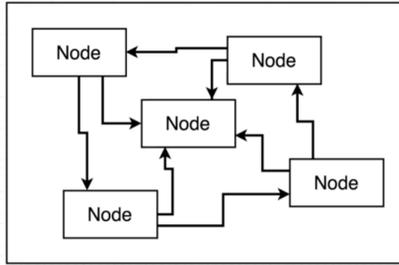

<http://web.archive.org/web/20131228111141/http://vbuterin.com/ethereum.html>

Dec-2013 White Paper about Ethereum by Vitalik Buterin

Introduced the idea of Smart Contract

30-Jul-2015 Ethereum was launched

An Ethereum Network

Ethereum networks are used to transfer money and store data
 There are many different Ethereum networks.
 Networks are formed by one or more nodes.
 Each node is a machine running an ethereum client.
 Anyone can run a node.
 Each node can contain a full copy of the blockchain
 The 'blockchain' is a database that stores a record of every transaction that has ever taken place

Transaction

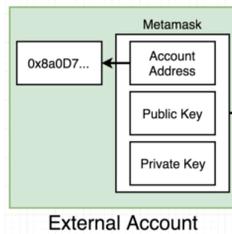

nonce	How many times the sender has sent a transaction
to	Address of account this money is going to
value	Amount of ether to send to the target address
gasPrice	Amount of ether the sender is willing to pay per unit gas to get this transaction processed
startGas/gasLimit	Units of gas that this transaction can consume
v	Cryptographic pieces of data that can be used to generate the senders account address. Generated from the <i>sender's</i> private key.
r	
s	

Transaction fields

v, r, s identify FROM

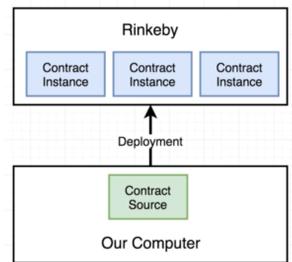

Visual demo of blockchain technology

<https://andersbrownworth.com/blockchain/>

External Account exists on all networks.
Contract Account exists on one specific network

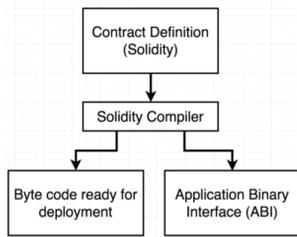

Contract Account	
Field	Description
balance	Amount of ether this account owns
storage	Data storage for this contract
code	Raw machine code for this contract

Contract Account should be deployed to the network

Section 1. What is Ethereum

Ethereum and Solidity - The Complete Developer's Guide

IDE for writing Ethereum smart contracts

<https://remix.ethereum.org/>

Contract creation transaction

Is a transaction with some extra

To = <empty>

Data = <compiled code>

Running Contract Functions	
'Calling' a Function	Sending a Transaction to a Function
Cannot modify the contract's data	Can modify a contract's data
Can return data	Takes time to execute!
Runs instantly	Returns the transaction hash
Free to do!	Costs money!

Two ways of calling functions on blockchain

Changing anything = transaction

Reading data (no changes to blockchain) is fast and free

Cannot return value - it returns transaction hash!

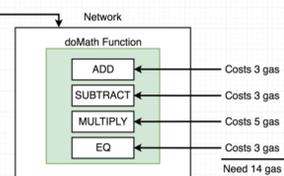

IT TAKES TIME! (if run on public networks)

1 ether = 10¹⁸ wei

https://docs.google.com/spreadsheets/d/1n6mRqkBz3i-WcOIRem_mO09GtSKEKAsfO7Frgx18pNU/edit#gid=0

Operation costs

Transaction to call function 'doMath'	
gasPrice	300
gasLimit	20

Total cost = 300 $\frac{\text{wei}}{\text{gas}}$ X 14 gas = 4,200 wei

12-word mnemonic phrase

A more convenient way to manage multiple accounts via MetaMask
